

Working for you

Carbon Footprint Data

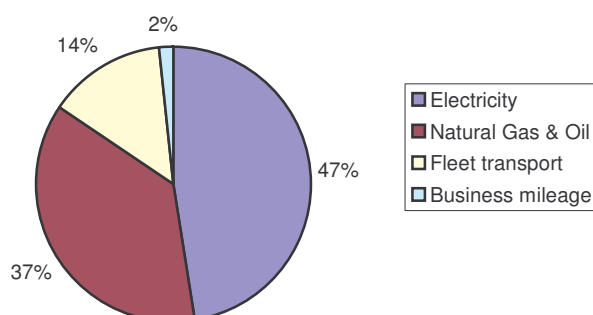

2009-10

	CO2 Tonnes
Electricity	5514.7
Natural Gas & Oil	3833.2
Fleet transport	1683.5
Business mileage	192.8
TOTAL	11224.2

2010-11

	CO2 Tonnes
Electricity	5557.4
Natural Gas & Oil	4315.1
Fleet transport	1610.6
Business mileage	191.4
TOTAL	11674.5

Notes: The overall carbon footprint increased by 4%. The greatest increase was in natural gas and gas oil use (12.5% increase on the previous year). This is thought to be the result of the exceptionally cold winter (Dec 2010 - Feb 2011), which significantly increased the heating demand.

Emissions from fleet transport have decreased by 4.3%, and business mileage remained at an approximately constant level (0.7% decrease).

Work has begun on developing a plan to reduce the financial and environmental running costs of the council's buildings and fleet over the next ten years. A report on this topic is scheduled to be brought forward within a few months of the date of publication of this carbon footprint.
